---> Comment Text :
From where I sit, all the information that has come out concerning Yucca Mountain indicates that it is well suited to the purpose of long term storage of high level radwaste. Most of the comments against this site, particularly those dealing with groundwater and geologic stability would probably apply to any other site in the continental US that might be considered. Considering the depth of the site study, the amount of time spent on this project, and the quality of the people involved in completing it, I cannot help but think that Yucca Mountain can be made to work as a high level radwaste storage facility.
